

BHADRA KORUKONDA

AI & ML Engineer | NLP, GNNs, Full-Stack Prototyping
bhadra.korukonda@gmail.com | +91 8639448680 | Hyderabad
[GitHub](#) | [Linkedin](#)

EDUCATION

Woxsen Univeristy
Computer Science B.tech
GPA: 3.0

Hyderabad, India
September 2022 - July 2026

Narayana Junior College
High School with Maths, Physics and Chemistry
Percentage: 87%

Hyderabad, India
June 2020 - May 2022

EXPERIENCE

Woxsen University | Research Assistant

Hyderabad, India | Jan 2023 - May 2023

- Resume Ranking using NLP and MCDM
- Developed a prototype model for resume sorting based on their behavioral patterns on social media usage.

Research Center Imarat ,DRDO | Data Scientist Intern Hyderabad, India | June 2024 - August 2024

- Automation Tools for Git Remote Operations and Statechart Event Data Validation
- Developed Automation solutions to streamline Git remote operations, improving version control efficiency.
- Implemented tools for validating statechart event data, ensuring accuracy and consistency in system workflows.

IIT Hyderabad | Research Intern

Hyderabad, India | May 2025 - July 05

- Contributing to cutting-edge research in AI for public infrastructure and environmental monitoring.
- Assisting in development and testing of deep learning models for real-world environmental datasets.

SKILLS

Programming Languages: Python
Libraries/Frameworks: React, Javascript
Tools / Platforms: Git, VS code, Docker, Kubernetes, AWS
Databases: SQL, MongoDB

PROJECTS / OPEN-SOURCE

Resume Ranking | [Link](#) *Natural Language Processing, Java Script, Multicriteria Decision Making, Python Flask*

- Designed and developed an application that utilizes Multi-Criteria Decision Making (MCDM) and Natural Language Processing (NLP) for dynamic and optimized candidate evaluation.
- The system integrates advanced text extraction, sentiment analysis, and ranking algorithms to deliver flexible and efficient resume assessments.

Health Insurance Premium Prediction and Recommendation System | [Link](#) *Python, Jupyter Notebook, Visual Studio Code, Machine Learning, Frontend-Backend Integration, Algorithm Design*

- Developed a system to predict health insurance premium prices using machine learning models and recommend budget-friendly plans tailored to user preferences.
- Tasks included converting Jupyter Notebook models for backend compatibility, designing algorithms for budget-based recommendations, and creating an intuitive frontend for user input. Integrated frontend and backend for real-time predictions and recommendations.

Intelligent Chatbot using OpenAI's GPT-3 | [Link](#) *Flask, HTML, CSS, OpenAI GPT-3 API, Python, JavaScript*

- Developed an interactive chatbot leveraging GPT-3's language capabilities.

- Integrated it into a responsive web application using Flask and deployed locally for seamless user interaction.
- Focused on real-time API communication and user-friendly UI/UX design.

AQI Prediction Using Graph Neural Networks

GAT, GCN, GRU, LSTM, Python, PyTorch

- Built a hybrid GNN model to predict PM2.5 levels in Delhi using temporal and spatial patterns.
- Automated metadata extraction, graph creation, and pipeline training with multiple model variants.
- Applied deep learning to improve air quality forecasting accuracy and support public health insights.

CERTIFICATIONS

- Core Java Specialization - **Learn Quest**
- Introduction to Generative AI - **Google Cloud**
- Data Structures - **University of California San Diego**
- Database Management Essentials - **University of Colorado**
- Operating Systems Fundamentals - **Akamai Technologies**
- Introduction to Web Development - **University of California, Davis**
- Cloud Virtualization, Containers, and APIs - **Duke University**
